

# MATTR DevOps Engineering Professional

Here at MATTR, we are building the future and re-imagining how we all interact with the world around us. This means we are on the lookout for passionate people that thrive working on evolving technology in a highly collaborative environment where every day you are encouraged to be crazy enough to believe we can make the impossible possible, that we can run on the edge and correct quickly and we do it by lifting others to achieve whatever we imagine, and checking our ego at the door.

MATTR values diversity in the workforce and we encourage candidates from diverse backgrounds, including those with access needs, to apply for our roles. If you encounter accessibility barriers in the application process or if you have access needs and require support or adjustments to participate equitably in the recruitment process, please email [info@mattr.global](mailto:info@mattr.global).

It's our belief that being brave enough to question everything, look around the corners for the surprising and listening carefully to others is what makes us successful. When the unexpected happens, we own it and fess up so that we can learn, adapt and share our knowledge.

If these values feel right to you then keep reading.

## **About the role**

We're looking for engineers at heart, someone that is naturally inquisitive and always looking for a better way to do something.

Our environment is entirely cloud-based and we approach everything with an automation first principle and strive to operate with all of our infrastructure defined in code.

We are looking for people that go looking for opportunities to improve and are able to learn and put into practice what they learn quickly. Specific technologies can be learnt, the ability to deliver meaningful change is the behaviour we value.

Because we are at the beginning of our journey you will be helping to define how we operate and establish our ways of working, everything from build and operate to monitoring and incident response is what we do in engineering.

### **As a MATTR DevOps engineer, your day will involve:**

- Having discussions within the team and external parties to gain the insights you need to deliver on the day's goals
- Working side by side with customers and people just as passionate as you
- Building automated scalable infrastructure and tools for the future of the internet
- Helping the development team to be the best they can be
- Being responsible for the consistent operation of critical infrastructure
- Solving problems that truly are unique
- Feeling like you are doing meaningful work
- The resolution of customer problems as part of a roster when required

### **About you**

It's our culture that makes MATTR the best place to work, so we are looking for people that contribute to that culture. People who are inquisitive, open, honest and generous with their time for others. People who take ownership, have a go and experiment. People who empower others, share their knowledge, are transparent and who actively seek out diversity and do what's right.

What you'll bring:

- Experience in operating infrastructure either on-premise or in the cloud, experience with Docker, Kubernetes, AWS and terraform would be an advantage
- Proven ability to quickly learn and apply your knowledge, we are looking for people that can imagine it and do it
- The ability to translate technical jargon into plain language, so many conversations will be abstract and learning how to extract the gold is key
- Familiarity with scripting and programming languages such as python, go, shell etc
- Ability to listen and communicate clearly and succinctly with those around you so we can all avoid confusion where possible

- The ability to switch direction when something doesn't work out and not be too proud to admit it

What We'll bring:

- A great space to work in, we are located in the generator down on Wynyard quarter right in the middle of the most innovative work going on in New Zealand
- Flexibility in how you work because we know that everyone is different and sometimes you have to be elsewhere
- The best people to work with, because we are reinventing how we interact with the world, we are attracting some amazing people and you will get to be one of them
- A competitive package, we have some amazing benefits that need to be seen to be believed, you won't be disappointed
- New challenges every day because everything we are doing is about running along the edge of what is possible
